

What is claimed is:

1. A light-emitting organic compound comprising ionic impurities at the concentration of 0.1 ppm or lower.

5

2. A light-emitting organic compound according to claim 1, wherein the ionic impurities are sodium or potassium.

10

3. A light-emitting organic compound comprising ionic impurities at the concentration of 0.01 ppm or lower.

4. A light-emitting organic compound according to claim 3, wherein the ionic impurities are sodium or potassium.

15

5. A method for forming a light-emitting organic compound, comprising the step of performing a purification process until ionic impurities contained in a light-emitting organic compound is reduced to a concentration of 0.1 ppm or lower.

20

6. A method according to claim 5, wherein the purification process for the light-emitting organic compound is performed by means of a process selected from a zone purification method, a recrystallization method, a reprecipitation process, a sublimation purification method, a filtration method, a column chromatography method, a high-performance liquid chromatography method, and a dialysis method.

25

7. A method according to claim 5, wherein the light-emitting organic

compound is a high-molecular compound purified by means of a dialysis method.

8. A method according to claim 5, wherein the ionic impurities are sodium or potassium.

5

9. A method for forming a light-emitting organic compound, wherein the purification process is continued to be performed until ionic impurities contained in the light-emitting organic compound is reduced to a concentration of 0.01 ppm or lower.

10

10. A method according to claim 9, wherein the purification process for the light-emitting organic compound is performed by means of a process selected from a zone purification method, a recrystallization method, a reprecipitation process, a sublimation purification method, a filtration method, a column chromatography method, a high-performance liquid chromatography method, and a dialysis method.

15

11. A method according to claim 9, wherein the light-emitting organic compound is a high-molecular compound purified by means of a dialysis method.

20

12. A method according to claim 9, wherein the ionic impurities are sodium or potassium.
